Tuấn — PA3 AI assistance record

Performed: Trần Lê Anh Tuấn (24125107), AI Orchestrator & Analysis Lead. Reviewed: Tuấn and assigned human reviewers, pending. Edited: Trần Lê Anh Tuấn (24125107).

Recorded 2026-11-09; publication authorization updated 2026-11-10. This is a per-member contribution record for incorporation into the team's Part F report, not a replacement for real meeting minutes or the team's weekly report.

1. User authorization and inputs

Performed: Tuấn (24125107). Reviewed: Tuấn, pending. Edited: Trần Lê Anh Tuấn (24125107).

The user supplied Jira screenshots for SCRUM-28, SCRUM-36, SCRUM-37 and SCRUM-47, requested a detailed explanation/plan, then authorized local completion of all four tickets with an initial prohibition on commits and pushes. On 2026-11-10, the user replaced that restriction with explicit authorization to create a PR, selecting Nguyễn Anh Khoa (24125058), AI Audio & Speech Pipeline Lead, as reviewer. Sources were the local `pa3` worktree at commit `fc6de2c`, original PA3-2026 PDF, requirements/architecture/G1 contracts, Vision and PA3 scope. Live Jira access was unavailable; no current Jira state beyond the screenshots was inferred.

2. Assistance performed

Performed: Tuấn (24125107). Reviewed: assigned human reviewers, pending. Edited: Trần Lê Anh Tuấn (24125107).

Codex updated the architecture/proposal contracts before coding; implemented room lifecycle and exact-grounding/LLM domain components with unit tests; drafted the 54-UC model and matching specifications; created offline HTML/CSS/JavaScript prototypes and main/alternative screenshots; added reproducible capture/traceability helpers; and used the existing Pandoc/Mermaid/latexmk pipeline for submission PDFs. Local tooling was installed only in ignored project directories. AI assistance included parallel drafting and independent code/design review by Codex agents; no agent review is represented as a human teammate's approval.

3. Verification and corrections

Performed: Tuấn (24125107). Reviewed: human verification pending. Edited: Trần Lê Anh Tuấn (24125107).

The full backend suite passed 135 tests, including 131 new ticket-specific tests; backend Ruff checks passed. Traceability checks covered 54 UCs, all 60 FRs and ten FGs. Headless browser checks covered 201 branch outcomes, consent/confirmation controls and mobile overflow without external requests. Mermaid diagrams were rendered and PDFs compiled using latexmk.

Independent review prompted corrections to the prototype: twelve grading values using the six required dimensions for both debaters, independent sharing grants, blocked unchecked consent, creator-selected stance, pre-LIVE leaving, moderation dismissal and camera refusal. Source and screenshots were regenerated after corrections. Local document validation and selected visual inspection are evidence of local preparation, not proof of deployment or complete product correctness.

4. Human review and remaining ownership

Performed: Tuấn (24125107). Reviewed: assigned human reviewers, pending. Edited: Trần Lê Anh Tuấn (24125107).

The Jira screenshots name Nguyễn Hồng Tấn Tài (24125078), Backend & Real-Time Media Lead, for SCRUM-28/36 and Nguyễn Đình Thiên Lộc (24125093), DevOps & QA / Fact-Checking Lead, for SCRUM-37; Nguyễn Bảo Minh Triết (24125047), Frontend & WebRTC/Audio Lead, is its co-owner. SCRUM-47's reviewer is not identified in the supplied screenshot. The user subsequently selected Nguyễn Anh Khoa (24125058), AI Audio & Speech Pipeline Lead, to review the combined PR. No meeting, peer approval, Jira update, paid model call, real media test or end-to-end deployment was performed. Initial delivery made no commit/push/PR; subsequent feature-branch publication is explicitly authorized. No merge is authorized or claimed. # 5. SCRUM-49 — account UI refinement and navigation review (2026-11-14) Performed: Trần Lê Anh Tuấn (24125107), AI Orchestrator & Analysis Lead. Reviewed: Nguyễn Đình Thiên Lộc (24125093), DevOps & QA / Fact-Checking Lead — pending. Edited: Trần Lê Anh Tuấn (24125107).

Tuấn asked for direct UI changes, a running preview and an explanation of changes, then reported that Triết does not require Figma edits and instructed that step to be skipped. Codex assisted with the existing account CSS/React components, Vietnamese font coverage, architecture/proposal updates, browser tests, navigation source review and before/after evidence. The existing auth request/response behavior and preview/media limits were preserved. Tuấn inspected the preview, requested the Figma exception and then authorized finishing the ticket, including its review handoff. This records those actual decisions, not a claim that Tuấn manually wrote every line or that another teammate approved it.

Browser auth checks intercept HTTP, and screenshot capture blocks API requests. No real account, password storage, media capture or backend deployment is part of this work. The navigation review covers the available baseline; UI-R02's still-visible preview selector is recorded as a follow-up for that package. Final verification and screenshots are in the SCRUM-49 evidence record. Peer review and merge remain pending.
