SCRUM-49 — account refinement evidence and navigation review

November 14, 2026

Performed: Trần Lê Anh Tuấn (24125107), AI Orchestrator & Analysis Lead. Reviewed: Nguyễn Đình Thiên Lộc (24125093), DevOps & QA / Fact-Checking Lead — pending. Edited: Trần Lê Anh Tuấn (24125107).

Prepared 2026-11-14. Scope: shared presentation and the existing sign-in, registration, confirmed-registration sign-in and sample-profile routes. The user authorized finishing this package and its review handoff. This record supplies code-review and browser evidence; it is not human approval, a Jira transition or an end-to-end backend claim.

1. Scope decision and completed changes

Performed: Trần Lê Anh Tuấn (24125107). Reviewed: Lộc (24125093), pending. Edited: Trần Lê Anh Tuấn (24125107).

Tuấn reported that Triết does not require Figma edits and explicitly instructed the assistant to skip them. This supersedes the Figma-edit step for UI-R01/SCRUM-49 only. The Cream & Yellow identity and existing Figma frames remain unchanged. No approval from Triết or Lộc is fabricated.

- Account headings use a 2rem desktop / 1.75rem narrow role, and the task column grows from 368px to 432px at desktop widths. Related fields and separate groups use consistent spacing.
- The named Show/Hide password control sits beside the input in one bordered group. Its touch target, keyboard focus, password value and autocomplete behavior are preserved.
- Registration separates credentials from the learning-profile group. Native CEFR radios show a check and explicit Selected text; self-assessment guidance remains visible.
- The sample-profile limitation appears before editing. Save stays disabled with its explanation beside the action; no account-saving API is invented.
- Local Unicode-scoped Vietnamese Inter 400/600 subsets supplement the original Latin fonts. Body text is not made smaller; fallback fonts remain usable.
- Real auth response validation, memory-only session behavior, all routes, room/media limits and existing error handling are preserved.

Architecture/proposal contracts were updated before product code. Files are limited to the shared controls/styles, account-page family, tests and supporting documentation; no room backend or media behavior is added.

2. Before/after captures

Performed: Trần Lê Anh Tuấn (24125107). Reviewed: Lộc (24125093), pending. Edited: Trần Lê Anh Tuấn (24125107).

The baseline was captured before editing at `cbf3ba0`. The later `5ca2cd6` pa3 update did not change `web/`, so the browser baseline still matches the current upstream UI. Images use the same 1440×1000 desktop and 390×844 phone viewports, with full-page capture. Files below are deliverable evidence rather than ignored build output.

Screen	Desktop before	Desktop after	Phone before	Phone after
Sign in	Before	After	Before	After

Screen	Desktop before	Desktop after	Phone before	Phone after
Registration	Before	After	Before	After
Account-created route	Before	After	Before	After
Profile	Before	After	Before	After

Opening account-created directly deliberately shows sign-in, without fabricated success. The existing intercepted-HTTP auth test separately verifies that a validated registration response shows Account created, preserves email and clears password. API requests are blocked during screenshot capture. No screenshot represents a real learner's account or grades.

3. Review of Tài's available navigation baseline

Performed: Trần Lê Anh Tuấn (24125107). Reviewed: Lộc (24125093), pending. Edited: Trần Lê Anh Tuấn (24125107).

Reviewed `web/src/App.tsx`, `web/src/routes.ts` and the room-entry/invitation/recovery exports against UI-R02's stable interfaces. No separately submitted completed UI-R02 refinement package is present in the inspected baseline; this review does not claim that future work was inspected.

Area	Finding and evidence
Route contract	All 12 route values are retained; the labelled Preview screen selector remains reachable. Direct URLs, reload and unknown-route recovery are covered by existing scaffold tests.
Keyboard and history	Skip to content focuses main without changing the route. Account/room navigation, back/forward, document titles and recovery return to the correct screen; the new integration test exercises this.
Boundaries	Room-entry/full/expired/invitation views identify sample data and do not submit codes or request media. Existing no-service room tests remain applicable.
UI-R02 follow-up	The preview selector is still fully visible in App.tsx; the compact disclosure requested by UI-R02 is not implemented. It remains Tài's package scope and is not presented as completed by SCRUM-49.

No navigation defect requiring an account-package change was found in these inspected paths. Browser evidence is not a human peer-review signature; Lộc's review and any resulting integration fixes remain pending.

4. Validation and reproduction

Performed: Trần Lê Anh Tuấn (24125107). Reviewed: Lộc (24125093), pending. Edited: Trần Lê Anh Tuấn (24125107).

Run from `web/`:

```
npm ci
npm run build
npm run lint
npm run test:e2e
```

The standard Playwright configuration expects its Chromium browser. For this machine, validation used installed Chrome with the same tests through a local runner config. Browser tests intercept auth HTTP and

do not contact a real account service. Results on 2026-11-14: build passed, lint passed, and all 79 browser tests passed (the existing 73 plus six account/navigation checks). The committed capture script also ran successfully with API requests blocked and produced all eight after images.

Account checks cover adjacent keyboard-operated password reveal, non-color CEFR feedback, all four routes at 320/390/640/768/1102/1440 CSS pixels with 200% text enlargement, long Vietnamese names, local 400/600 glyph loads, blocked-font fallback and reduced motion. The 640px case exercises the reflow width equivalent of a 1280px viewport at 200% browser zoom; this is a layout proxy, not a claim of physical-device certification.

With the local Vite server running, reproduce after images using Playwright Chromium:

```
node scripts/capture-account-review.mjs
```

Or use an installed Chrome:

```
node scripts/capture-account-review.mjs --channel chrome
```

The script writes to ignored `report_build/scrum49-capture`, uses local font assets and blocks API requests. Preserve the supplied before captures; they are the pre-change baseline. Human visual review, any requested revisions and merge remain pending.
